¶ The Contentes of this preſent Almanacke and Prognoſtication for the yeare of our Lord God 1610.

The golden number is 15
The Epact is 15
The circle of the ſunne is 23
Inductio Romana 8
The Dominicall letter is G

Shroueſunday is the 18 of Febꝛuary.
Eaſter day the 8 day of Apꝛill.
Holy Thurſday the 17. of May.
whitſunday the 27 of May.
From Chꝛiſtmas to Shꝛoueſunday is 8. weekes and fiue daies.

God
- To let the Sanguine bloud when the Moone hath her courſe in ♓.
- To let the Chollericke bloud when the moon is in ♌ oꝛ ♈.
- To let the Melancholike bloud the Moone being in ♎, ♒ oꝛ ♓.
- To let bloud the Phlegmaticke, the Moone being in ♐ oꝛ ♒.
- To pꝛepare humoꝛs when the Moone is in ♊, ♎, oꝛ ♒.

Phyſicall obſeruations.

God to purge
- with Electuaries the moone being in ♌.
- with Pilles the moone being in ♈.
- with Pottons when the Moone is in Scoꝛpio.

Good

Good to take Vomits when the moone is in ♂, ♍, or the latter part of ♐.

Good to purge the head by neezing, when the moone is in ♋, ♌, or ♍.

Good to take Glysters the moone being in ♈, ♋, ♎ or ♍.

Good to stop fluxes and Rhewmes, when the moon is in ♂, ♍, or ♍.

The best times to bath, are when the moone is in ♋ ♎, ♒, or ♓.

Cut haire of the head and beard, the moon being wel seated in ♎, ♐, ♒, ♓.

Briefe obseruations of Husbandry.

SEt, sow seeds, graft and plant, the moon being wel seated, and in ♂. ♍. or ♍.

And all kind of corne in ♋.

Graft also when the Moone is increasing, and in ♂, or ♒.

Sheare sheepe the moone encreasing.

Fell hard Timber, from the full to the change.

Fell, fryth, Coppice, and fewell, at the first quarter.

Lib and geld Cattell the moone in ♈, ♐. or ♍.

Kill fat Swine for Bacon, the better to keepe their fat in boyling, about the full moone.

Ianuary hath xxxi. daves.

Dade. 1610.

A Prognoſtication, in which you may behold the ſtate of this yeere *of our Lord God*, 1610.

Beeing the ſecond after *the Leape yeere*.

Made and ſet forth by *John Dade* gentleman, practitioner *in Phiſicke*.

Printed for the Company of Stacioners.

Cum priuilegio.

A neceſſarie and perfect rule to knowe the beginning and ending of euery Terme, *with their returnes.*

HIllarie terme beginneth the 13. day of Januarie, (if it be not Sunday) which ſo being, it is then deferred vntill the day following, and endeth the 12. of Februarie, which terme hath 4. returnes, that is to ſay,

Octabis. Hillarie. } { Craſt. Purifica.
Quind. Hillarie. } { Octab. Puurifica.

EAſter terme beginneth 17 daies after Eaſter, and endeth the munday next after the Aſſention day, and hath 5. returnes, that is to ſay.

Quind Paſche. } { Quinque Paſche.
Treſ. Paſche. } Menſe. Paſche. { Craſtin. Aſcen.

TRinitie terme beginneth the friday next after Trinitie ſunday, and endeth the wedneſday fortnight after, & hath 4. returnes, that is to ſay.

Craſt. Trinitatis } { Quind. Trinitatis.
Octab. Trinitatis. } { Tres. Trinitatis.

MIchaelmas terme beginneth the 9. of October, (if it bee not ſunday, as is afore ſaid) and endeth the 28. of Nouember, and hath 8. returnes, viz.

Octab. Micha. } { Craſt. Anima.
Quind. Micha. } { Craſt. Mart.
Tres. Micha. } { Octa Mart.
Manſ. Micha. } { Quind. Mart.

Note alſo that the Exchequer openeth 8. daies before any tearme begin, except Trinitie Terme, in which it openeth but 4. daies before.

A deſcription of the foure quarters of the yeere, and firſt of winter quarter, 1610.

Sol in cap. ♑.

ACcording to our Engliſh account winter began, whenas the ſunne had finiſhed his courſe through the three Autumnall ſignes, ♎ ♏ ♐, and had entred into the firſt minute of cap., (viz.) the 12. day of december laſt paſt, being tueſday, making then with vs the winter Solſtice or ſhorteſt day, and longeſt night in the whole yeere, by reaſon of the ſunnes greateſt declination from the Equinoctiall line: which winter continueth vntill the 11. day of March then next following. This ſeaſon of his own naturall diſpoſition is knowne to be cold and moiſt, contrarie to the qualitie of ſommer, whoſe enemie it may ſeeme to be.

Touching the temperature and ſtate of this quarter, I gather that the ſame is like to proone kinde and naturall enough, as may be ſeene in the daily diſpoſition of this ſeaſon.

The greefes that accompanie this quarter, are conuulſious cramps, ſtitches, aches, & ſoarenes in the bones, Sciatica, gowt, and ſwellings, & knobs in the ioynts, alſo rheumes and Cattarres, falling out of the head into the teeth, throat and lungs, cauſing ſodaine daunger of ſuffocation to the diſeaſed hereby.

Of

Of the ſecond quarter of the yeere çalled the ſpring.

Sol in ♈ ♉ ♊.

The ſunne hauing fully finiſhed the winter quarter with the laſt part of ♑ beginneth the ſpring (being the ſecond part of this yeare) the 11. day of March, then entring into the firſt minute of ♈, the equinoctiall ſigne, making the day and night equall through the world, and from thence continuing vntill the 12. day of June immediately enſuing.

This quarter of the naturall qualitie, is of all the reſt the moſt pleaſant and temperate: and as I gather by probable conſiderations, will not be much vnſeaſonable, as may be ſeene in the daily diſpoſition of the weather.

The greeſes of this ſeaſon may eſpecially ſuch like namely Pluriſies, ſodaine ſwellings, Angina or ſquinſies, fluxes of diuerſe ſorts, madnes, melancholie, the falling ſickneſs, coughs, poſes, ſcabbes, atch in the ioynts, obſtructions in the lungs, paine in the head and eyes, rotten feuers, new agues, & ſome ſtrange diſeaſes.

Of the third quarter of the yeare, called ſommer.

Sol in ♋ ♌ ♍.

The third part of the yeere Aſtronomicall, called the ſommer quarter, alwaies taketh his beginning at the ſuns departure from the laſt degree of ♑ into the beginning of ♋, at which time he is in his neereſt proximitie to our vertical point, making his greateſt declinatiō towards the north, from the equinoctiall, cauſing the Summer or eſtiuall Solſtice: and ſo conſequently the longeſt day and ſhorteſt night in the yeere, which ſhall be this yeere on tueſday the 12. day of June, and ſo continuing the ſummer quarter, vntill the 13.

day of September. The predominant qualities of this season, according to his peculier nature, are heate and dryneſſe, as concerning the preſent inclination of the weather, you may plainly ſee in the weathers daily diſpoſition.

Touching ſickneſſes and bodilie greefes, ſome of thoſe which before raigned in the ſpring, ſhall now likewiſe prevaile, and (I feare) there is ſcarſe any diſeaſe to bee named, which is not afflicting mens bodies, as hot feuers, vomittings, fluxes, vnkindly ſweats, ſcabbes, bleedings, dropſies, ſhortnes of breath, grypings in the ſtomacke, and ſome ſharp diſeaſes among children.

Of the fourth part of the yeere called Autumne or the fall of the leafe.

Sol in ♎ ♏ ♐.

AUtumne or harueſt quarter being the fourth and laſt part of the yeere, which the Aſtronomers and the moſt profitable time of the yeere, beginneth euermore at the time of the ſuns departure from the laſt circle of the 30. degree of ♍, and ſpreadeth into the firſt minute of the ſecond equinoctiall ſigne ♎, working the ſame effect that he did at his going into ♈, that is, making the day & night iuſt of one length, which ſhall be this yeere on fryday the 14. day of September and endureth vntill the 12. day of december nert enſuing.

The diſpoſition of this ſeaſon is to be vnconſtant and variable, by meanes whereof it is the nurſe of moſt ſicknelles happening in the ſpring, how the aire will be inclyned throughout all harueſt, may be ſeene in the daily diſpoſition thereof.

The diſeaſes and ſickneſſes in this quarter of this yeere, moſt doubtfull to afflict the bodie, are quartan agues, obſtructions and paine in the ſplene, the piles and hemorrhoides, ſhortneſſe of breath, cõſumption, the Hipocundriaca paſſio, with ſome paines in the head, dropſies, ſtranguries, gout and ſciatica, with ſome other ſickneſſes very greeuous.

A Briefe deſcription how the ſeuen planets are placed aboue the earth in the skie, or vnder the earth, for euery moneth after ſun ſetting, by which you may perceiue how they keepe their motion night and day all the yeere. Moreouer the good daies of Sympathy touching mans complexion and bodie in cauſes of adminiſtration of phyſicke or ſuch like, and alſo the euill daies (according to the maleuolent aſpects of the planets) in which it is dangerous to let blood, take vomites, purgations, ſweats or ſuch like attempts.

of Ianuary.

♄ Goeth downe with the ſunne.
♃ Appeareth towards mid heauen after ſunne ſetting.
♂ Is vnder the earth at ſunne ſetting.
♀ Is our morning ſtarre appearing in the eaſt before ſunriſing.
☿ Riſeth before the ſunne.

The firſt day a clowdie and thicke skie, the ſecond day faire.
The 3.4. and 5. daies variable diſpoſed.
Laſt quarter on ſatterday the 6. day about ten of the clocke at night.
